

Sébastien Bahloul

Sébastien Bahloul has been working on Open Source identity management systems for ten years. Starting around the OpenLDAP directory server, he has created different projects: LinID Directory Manager, a generic interface for user registration and accreditation, LSC provisioning engine and an OpenLDAP cn=config administration interface (LinID OpenLDAP Manager). He has designed and implemented different directory and web critical architectures. He recently joins Dictao, French security software editor (electronic signature, authentication and validation products), as future product manager. As the original developer and main active contributor for the LSC project, he is involved in spreading the project, always looking for technological improvements and user driven requests. In his spare time, he enjoys climbing, running, playing harpsichord and gardening.
