

# LDAP

## Best Practice

Project to collect LDAP deployment guidelines

- Design
- Security
- Management

ISO/IEC 27000:2009 - Information Security is:

- Confidentiality
- Integrity
- Availability
- And some other things...

Sysadmins need up-to-date advice to counter current threats - not 1980s rules to keep script-kiddies out of timesharing systems!

We all need auditors to assess systems against appropriate criteria. The LDAP community should be helping to define those criteria.
