

What happens when  
a big Company  
splits ?

New access badges

They were red,  
the new one will be blue.

Stop replication  
between the companies

But some data still need  
to flow  
between entities...

You need a convertor  
that will tax  
your system

# A new protocol has to be negotiated:

- *“Piece of cake”*
- *“Easiest negotiation in the IT history”*

WTO connector

You have to deal with the  
Directory Unionist Protocol  
Which is a PITA...

Aka

DUP

And the 'U' in 'Unionist'  
does not mean  
exactly what you think...

“No DIT  
is better than a  
bad DIT”

At the end, it's all about injecting  
Directory Information Entries  
In a  
DIT company hosts

aka

“Die in a Ditch”
